

BLUETOOTH BROWSER NEEDED

Safari on iPhone can't talk to Bluetooth devices from a web page, but there's a free fix:

1. Install **Bluefy – Web BLE Browser** [from the App Store](#) (free).
2. Save this file to your **Files** app (or host it anywhere).
3. Open it inside Bluefy, snap the power bit on your droid, and hit **CONNECT**.

SHOW THE APP ANYWAY
